IV. PATIENTS GROUPS, FARMERS, DOCTORS, HEALTH AUTHORITIES, AGRICULTURAL AUTHORITIES, INSURERS /TENDERERS

Intellectual property (IP), such as patents or trademarks, plays a key role in encouraging investment in innovation. A 2013 study (IP Rights intensive industries: Contribution to economic performance and employment in Europe, EUIPO, 2013) revealed that 39% of economic activity in the EU is generated by IP-intensive industries, while 26% of all employment is provided directly by these industries.

Industry sectors whose products are subject to regulated market authorisations, such as the pharmaceutical, medical devices and agrochemical industries, rely heavily on industrial property protection through patents, Supplementary Patent Certificates (SPCs) and data /market exclusivity.

SPCs are a sui generis IP right that constitute an extension (of up to five years) to the term of a patent right (of twenty years). SPCs aim to offset the loss of effective patent protection that occurs due to the compulsory and lengthy testing and clinical trials that products require prior to obtaining regulatory marketing approval. The relevant EU legislation is Regulation (EC) No 469/2009 and Regulation (EC) No 1610/96 on SPC covering pharmaceutical and plant protection products respectively.

The Bolar patent exemption aims at speeding up the entry of generic medicines into the market by allowing early preparatory development on generics to obtain pre-market regulatory approval even when the SPC of the reference medicine is still in force. It is regulated at EU level for the pharmaceutical industry only through Article 13(6) of Directive 2001/82/EC and Article 10(6) of Directive 2001/83/EC. The scope of the EU Bolar exemption has been updated in some EU MS, inter alia, to meet new pharmaceutical-related requirements.

The specific industrial property legal framework in the EU for industry sectors whose products are subject to regulated market authorisations might present several features not fit for purpose in today's global economy and in the light of new regulatory requirements.

Firstly, existing SPCs are granted and enforced at national level, which can result in Single Market fragmentation. There are cases where some Member States have granted SPC applications while the very same application has been either refused or granted with a different scope in other Member States.

Secondly, Member States implement the 'Bolar exemption' in different ways: on the one hand, some Member States do not allow the supply of active pharmaceutical ingredients to EU-based generic manufacturers for the purpose of seeking marketing authorisation, and on the other hand, in a number of Member States, it is not certain whether testing in the EU by originators and biosimilars can benefit from these exemptions for the purpose of seeking marketing authorisation in the EU and in non-EU countries, or for meeting emerging regulatory requirements such as those related to health technology assessment.

Thirdly, manufacturers of generic and biosimilar medicines based in non-EU countries where SPC protection does not exist (e.g. in Brazil, Russia, India and China) enter markets in which patent protection expired up to five years earlier than EU-based manufacturers. This is possible because EU-based manufacturers are not allowed to produce in EU Member States during the period of the SPC protection of the reference medicine. Such a situation could lead to a lack of playing field between EU and non EU manufacturers with an advantage for non EU manufacturers.

The Single Market Strategy, adopted in October 2015 (COM(2015)550), announced that the Commission will "consult, consider and propose further measures, as appropriate, to improve the patent system in Europe, notably for pharmaceutical and other industries whose products are subject to regulated market authorisations". In particular, the Strategy undertook to explore a recalibration of certain aspects of patent and SPC protection, and announced that this recalibration could mainly comprise the following three elements: the creation of a European SPC title; an update of the scope of the EU patent research exemptions; and the introduction of an SPC manufacturing waiver (the so-called 'SPC manufacturing waiver' for export purposes would allow EU based manufacturers of generics /biosimilars manufacturing their products during the EU SPC term of the reference medicine to export their products to countries with no SPC protection). The European Commission published an "inception impact assessment" on 15 February 2017.

The current public consultation seeks to gather feedback of all stakeholders on the way the SPC system currently functions in the EU and its effects on trade and competitiveness in particular.

The Commission will report on the results of its consultation which, together with ongoing evaluation studies, will help the Commission assess whether the EU SPC framework is still fit for purpose or needs to be recalibrated, notably as regards the aspects set out in Single Market Strategy.

The next few questions are about how effective supplementary protection certificates (SPCs) and Bolar exemptions are in the EU.

We want to find out how much progress has been made in meeting the following objectives (from SPC legislation adopted in the 1990s):

- attracting research
- preventing delocalisation
- protection for long enough to recover investment
- promoting essential innovation for patients
- competition through innovation
- limiting the negative effects of fragmentation.

The SPC is an incentive for innovation investment in pharmaceutical and plant protection products. The SPC legislation was introduced in the EU in the 1990s.

In most of the following questions, we'd like to find out your views on how innovation and market competition are progressing for these products since SPC legislation was introduced in the EU.

2. In the last two decades in the EU, how do you perceive the progress made in.....

V. NATIONAL PATENT OFFICES, JUDGES AND IP PROFESSIONALS

Intellectual property (IP), such as patents or trademarks, plays a key role in encouraging investment in innovation. A 2013 study (IP Rights intensive industries: Contribution to economic performance and employment in Europe, EUIPO, 2013) revealed that 39% of economic activity in the EU is generated by IP-intensive industries, while 26% of all employment is provided directly by these industries.

Industry sectors whose products are subject to regulated market authorisations, such as the pharmaceutical, medical devices and agrochemical industries, rely heavily on industrial property protection through patents, Supplementary Patent Certificates (SPCs) and data /market exclusivity.

SPCs are a sui generis IP right that constitute an extension (of up to five years) to the term of a patent right (of twenty years). SPCs aim to offset the loss of effective patent protection that occurs due to the compulsory and lengthy testing and clinical trials that products require prior to obtaining regulatory marketing approval. The relevant EU legislation is Regulation (EC) No 469/2009 and Regulation (EC) No 1610/96 on SPC covering pharmaceutical and plant protection products respectively.

The Bolar patent exemption aims at speeding up the entry of generic medicines into the market by allowing early preparatory development on generics to obtain pre-market regulatory approval even when the SPC of the reference medicine is still in force. It is regulated at EU level for the pharmaceutical industry only through Article 13(6) of Directive 2001/82/EC and Article 10(6) of Directive 2001/83/EC. The scope of the EU Bolar exemption has been updated in some EU MS, inter alia, to meet new pharmaceutical-related requirements.

The specific industrial property legal framework in the EU for industry sectors whose products are subject to regulated market authorisations might present several features not fit for purpose in today's global economy and in the light of new regulatory requirements.

Firstly, existing SPCs are granted and enforced at national level, which can result in Single Market fragmentation. There are cases where some Member States have granted SPC applications while the very same application has been either refused or granted with a different scope in other Member States.

Secondly, Member States implement the 'Bolar exemption' in different ways: on the one hand, some Member States do not allow the supply of active pharmaceutical ingredients to EU-based generic manufacturers for the purpose of seeking marketing authorisation, and on the other hand, in a number of Member States, it is not certain whether testing in the EU by originators and biosimilars can benefit from these exemptions for the purpose of seeking marketing authorisation in the EU and in non-EU countries, or for meeting emerging regulatory requirements such as those related to health technology assessment.

Thirdly, manufacturers of generic and biosimilar medicines based in non-EU countries where SPC protection does not exist (e.g. in Brazil, Russia, India and China) enter markets in which patent protection expired up to five years earlier than EU-based manufacturers. This is possible because EU-based manufacturers are not allowed to produce in EU Member States during the period of the SPC protection of the reference medicine. Such a situation could lead to a lack of playing field between EU and non EU manufacturers with an advantage for non EU manufacturers.

The Single Market Strategy, adopted in October 2015 (COM(2015)550), announced that the Commission will "consult, consider and propose further measures, as appropriate, to improve the patent system in Europe, notably for pharmaceutical and other industries whose products are subject to regulated market authorisations". In particular, the Strategy undertook to explore a recalibration of certain aspects of patent and SPC protection, and announced that this recalibration could mainly comprise the following three elements: the creation of a European SPC title; an update of the scope of the EU patent research exemptions; and the introduction of an SPC manufacturing waiver (the so-called 'SPC manufacturing waiver' for export purposes would allow EU based manufacturers of generics /biosimilars manufacturing their products during the EU SPC term of the reference medicine to export their products to countries with no SPC protection). The European Commission published an "inception impact assessment" on 15 February 2017.

The current public consultation seeks to gather feedback of all stakeholders on the way the SPC system currently functions in the EU and its effects on trade and competitiveness in particular.

The Commission will report on the results of its consultation which, together with ongoing evaluation studies, will help the Commission assess whether the EU SPC framework is still fit for purpose or needs to be recalibrated, notably as regards the aspects set out in Single Market Strategy.

National Patent Office of the Netherlands

The next few questions are about how effective supplementary protection certificates (SPCs) and Bolar exemptions are in the EU.

We want to find out how much progress has been made in meeting the following objectives (from SPC legislation adopted in the 1990s):

- attracting research
- preventing delocalisation
- protection for long enough to recover investment
- promoting essential innovation for patients
- competition through innovation
- limiting the negative effects of fragmentation.

SPCs are regulated under EU law (Regulation (EC) No 469/2009 and Regulation (EC) No 1610/96), but granted in each EU country by a national authority.

- They are enforced nationally in national courts.
- Registration procedures can vary between EU countries.
- Sometimes, authorities (grant authority or court) in different EU countries can reach different conclusions on the validity or scope of the SPC protection they grant (or refuse) in their country for the same product.
- National courts have referred several questions on the interpretation of SPC legislation to the Court of Justice of the EU.

In the next few questions, we'd like to hear about your experience of how harmonised SPC protection is across the EU.

2. Have authorities in different EU countries ever taken different decisions on SPC applications for one (or more) of products)?

Examples: some EU countries granted SPC national applications for one of your products but refused others; you were granted different durations of SPC protection for one of your products in different EU countries; national grant authorities interpreted EU Court of Justice rulings differently.

Yes

O No

Don't know

If you answered 'yes' to Question 2, please explain in the box below.

1500 character(s) maximum
Every-expert in this field will acknowledge that the interpretation of the Regulation is not uniform throughout
Europe. Numerous examples could be given. In our practice, when we reject an SPC application the applicant wil
often point to the fact that it was granted in other member states. Referrals to the CJEU also often highlight the
fact that the SPC was granted in some member states, but refused in others.

3. Has an EU country's courts ever taken a different decision in relation to the SPC of a specific product (e.g. you observe the validity of an SPC upheld by some EU countries' courts but revoked by others; some EU countries' courts concluded that there was infringement of a specific SPC, while others did not)?

Yes

O No

Don't know

If you answered 'yes' to Question 3, please explain in the box below.

1500 character(s) maximum
Every expert in this-field will acknowledge that the interpretation of the Regulation is not uniform throughout
Europe. Numerous examples could be given. In our practice, when we reject an SPC application the applicant wil
often point to the fact that it was granted in other member states. Referrals to the CJEU also often highlight the
fact that the SPC was granted in some member states, but refused in others.

Generics and biosimilars enter the market when the patent/SPC for that market expires (subject to other industrial property rights that could still be in force). A transparent SPC system can make it easier for generics/biosimilars to compete.

4. About your use of databases to monitor the status of your competitors' SPC protection across EU Member States...

	Agree	Disagree	Don't know/no opinion
to our knowledge, there are no databases available to conduct such monitoring	0	1	0
specialised databases are very costly		0	6

We'd like to hear your views on how fragmented you think the EU SPC system is so that we can consider potential improvements (e.g. a unitary (single) SPC).

5. Has your country enacted legislation on SPCs to transpose the EU regulations on SPCs? _Yes
No, the national authority that grants the SPC relies directly on the SPC regulations Don't know/no opinion
2 on thing with a spiritory
5.1. If you answered 'yes' to Question 5, has your EU country ever updated that legislation following a judgment from the Court of Justice of the EU? Yes
© No
O Don't know/no opinion
6. Has your country (e.g. your national patent office) adopted implementing guidelines for examining and registering SPCs?
Yes
No, the national authority that grants the SPC relies directly on the SPC regulations Don't know/no opinion
6.1. If you answered 'yes' to Question 6, do you usually update the guidelines following a judgment from the Court of Justice of the EU?
© Yes
© No
Don't know/no opinion
The efficiency of the current EU SPC system could be improved, for example by using a unitary (single) SPC.
In the next few questions, we'd like to find out how much complexity SPC applicants face when filing SPC in the EU (of course, some degree of complexity is always expected in highly technical fields such as pharmaceutical or plant protection products innovation).
7. How would you rate the degree of complexity of registration procedures for SPCs in the EU? High
© Reasonable
© Low
© Don't know/ no opinion
How could procedures be improved? (max. 1 500 characters, incl. spaces)
The registration procedures could be improved by removing uncertainties stemming from the extensive jurisprudence surrounding the regulation.
Reasonable Low Don't know/ no opinion How could procedures be improved? (max. 1 500 characters, incl. spaces) 1500 character(s) maximum The registration procedures could be improved by removing uncertainties started.

SPC protection could have had unintended adverse effects in other sectors.

EU-based generics and biosimilar manufacturers argue that EU SPC protection puts them at a disadvantage compared with foreign-based manufacturers.

They want to see the introduction of an 'SPC manufacturing waiver' (see introduction to this questionnaire for more details).

In the following questions, we'd like to find out about the challenges faced by this sector of the pharmaceuticals industry.

8. Do you agree or disagree with the following statements?

	Agree	Disagree	No opinion
SPCs inadvertently disadvantage EU-based generics and biosimilars manufacturing compared with countries with no SPC (e.g. for exports outside the EU and for entry in the EU following the expiry of the SPC)	0	0	1
When placing generics and biosimilars on the EU market after the SPC expires, SPCs disadvantage EU-based generics and biosimilars manufacturing compared with generic companies based in countries with no SPC	0	0	4
The EU SPC, in its current form, increases reliance on imports of medicines and active pharmaceutical ingredients from outside the EU	© .		V

The following questions relate to the cost of registration and enforcement of SPCs, and whether the current cost level impacts on SCP holders' behaviour (e.g. whether it limits the number of registrations).

VI. PUBLIC AUTHORITIES RELATED TO SCIENCE, INDUSTRY, TRADE AND COMPETITION

Intellectual property (IP), such as patents or trademarks, plays a key role in encouraging investment in innovation. A 2013 study (IP Rights intensive industries: Contribution to economic performance and employment in Europe, EUIPO, 2013) revealed that 39% of economic activity in the EU is generated by IP-intensive industries, while 26% of all employment is provided directly by these industries.

Industry sectors whose products are subject to regulated market authorisations, such as the pharmaceutical, medical devices and agrochemical industries, rely heavily on industrial property protection through patents, Supplementary Patent Certificates (SPCs) and data /market exclusivity.

SPCs are a sui generis IP right that constitute an extension (of up to five years) to the term of a patent right (of twenty years). SPCs aim to offset the loss of effective patent protection that occurs due to the compulsory and lengthy testing and clinical trials that products require prior to obtaining regulatory marketing approval. The relevant EU legislation is Regulation (EC) No 469/2009 and Regulation (EC) No 1610/96 on SPC covering pharmaceutical and plant protection products respectively.

The Bolar patent exemption aims at speeding up the entry of generic medicines into the market by allowing early preparatory development on generics to obtain pre-market regulatory approval even when the SPC of the reference medicine is still in force. It is regulated at EU level for the pharmaceutical industry only through Article 13(6) of Directive 2001/82/EC and Article 10(6) of Directive 2001/83/EC. The scope of the EU Bolar exemption has been updated in some EU MS, inter alia, to meet new pharmaceutical-related requirements.

The specific industrial property legal framework in the EU for industry sectors whose products are subject to regulated market authorisations might present several features not fit for purpose in today's global economy and in the light of new regulatory requirements.

Firstly, existing SPCs are granted and enforced at national level, which can result in Single Market fragmentation. There are cases where some Member States have granted SPC applications while the very same application has been either refused or granted with a different scope in other Member States.

Secondly, Member States implement the 'Bolar exemption' in different ways: on the one hand, some Member States do not allow the supply of active pharmaceutical ingredients to EU-based generic manufacturers for the purpose of seeking marketing authorisation, and on the other hand, in a number of Member States, it is not certain whether testing in the EU by originators and biosimilars can benefit from these exemptions for the purpose of seeking marketing authorisation in the EU and in non-EU countries, or for meeting emerging regulatory requirements such as those related to health technology assessment.

Thirdly, manufacturers of generic and biosimilar medicines based in non-EU countries where SPC protection does not exist (e.g. in Brazil, Russia, India and China) enter markets in which patent protection expired up to five years earlier than EU-based manufacturers. This is possible because EU-based manufacturers are not allowed to produce in EU Member States during the period of the SPC protection of the reference medicine. Such a situation could lead to a lack of playing field between EU and non EU manufacturers with an advantage for non EU manufacturers.

The Single Market Strategy, adopted in October 2015 (COM(2015)550), announced that the Commission will "consult, consider and propose further measures, as appropriate, to improve the patent system in Europe, notably for pharmaceutical and other industries whose products are subject to regulated market authorisations". In particular, the Strategy undertook to explore a recalibration of certain aspects of patent and SPC protection, and announced that this recalibration could mainly comprise the following three elements: the creation of a European SPC title; an update of the scope of the EU patent research exemptions; and the introduction of an SPC manufacturing waiver (the so-called 'SPC manufacturing waiver' for export purposes would allow EU based manufacturers of generics /biosimilars manufacturing their products during the EU SPC term of the reference medicine to export their products to countries with no SPC protection). The European Commission published an "inception impact assessment" on 15 February 2017.

The current public consultation seeks to gather feedback of all stakeholders on the way the SPC system currently functions in the EU and its effects on trade and competitiveness in particular.

The Commission will report on the results of its consultation which, together with ongoing evaluation studies, will help the Commission assess whether the EU SPC framework is still fit for purpose or needs to be recalibrated, notably as regards the aspects set out in Single Market Strategy.

The next few questions are about how effective supplementary protection certificates (SPCs) and Bolar exemptions are in the EU.

We want to find out how much progress has been made in meeting the following objectives (from SPC legislation adopted in the 1990s):

- attracting research
- preventing delocalisation
- protection for long enough to recover investment
- promoting essential innovation for patients
- competition through innovation
- limiting the negative effects of fragmentation.

The SPC is an incentive for innovation investment in pharmaceutical and plant protection products. The SPC legislation was introduced in the EU in the 1990s.

In most of the following questions, we'd like to find out your views on how innovation and market competition are progressing for these products since SPC legislation was introduced in the EU.

2. In the last two decades in the EU, how do you perceive the progress made in......

s, which you person the progress made in							
	Down a lot	Down a bit	Stable	Up a bit	Up a lot	No opinion

Next, we'd like to ask you some questions about the costs and benefits of SPCs.

SPC protection could have had unintended adverse effects in other sectors.

EU-based generics and biosimilar manufacturers argue that EU SPC protection puts them at a disadvantage compared with foreign-based manufacturers.

They want to see the introduction of an 'SPC manufacturing waiver' (see introduction to this questionnaire for more details).

In the next few questions, we'd like to find out about the challenges faced by this sector of the pharmaceuticals industry.

4. Based on your experience, do you agree with the claims below on how the SPC system is performing in the EU?

	Agree	Disagree	No opinion
In its current form, the SPC in the EU unintendedly discriminates against EU-based generics & biosimilars manufacturing compared with manufacturers located in non-EU countries with no SPC type protection (e.g. for exports outside the EU)	4	0	0
In its current form, the SPC in the EU increases reliance on imports of medicines and active pharmaceutical ingredients from outside the EU	0	1	0

SPC legislation aims to ensure adequate protection for innovation and improving public health.

We want to evaluate whether the objectives of the SPC regulation match current needs and problems (e.g. only some types of innovations are eligible for SPC protection; new regulatory requirements did not exist when the SPC regulation came into force and some activities linked to new regulatory requirements are not covered by the Bolar exemption).

5. In your experience, is SPC protection sufficient to encourage investment in certain types of innovations (e.g. antibiotics, medicines for the treatment of neglected diseases and orphan diseases)?

Don't know/no opinion

In our opinion, SPC protection does not encourage investment in certain and neglected diseases. If a low return-on-investment is already anticumpredictable sales of certain antibiotics, extra SPC protection will not negative to very positive.	inated because of e.g. very low or
