# PARTIAL REVISION OF THE RADIO REGULATIONS, GENEVA, 1959 

In pursuance of Resolution No. 13 of the Ordinary Administrative Radio Conference, Geneva, 1959, the Administrative Council of the Union at its 18th Session (1963) adopted Resolution No. 525 proposing that an Extraordinary Administrative Radio Conference should be convened in order to review the provisions of Appendix 26 to the Radio Regulations relating to the Aeronautical Mobile (R) Service and the associated provisions of the Radio Regulations. The proposal having been accepted by a majority of the Members of the Union, the first session of the Extraordinary Administrative Radio Conference was held in Geneva from 27th January to 20th February 1964.

During its 20th Session (1965), the Administrative Council adopted Resolution No. 563 by which it decided, with the prior agreement of the majority of the Members of the Union, that the second session of the Extraordinary Administrative Radio Conference should be held in Geneva from 14th March 1966 for a period of 8 weeks, with the following agenda:
"On the basis of the decisions taken by the preparatory session of the Conference and the preparatory work undertaken by the I.F.R.B., to review and, to the extent considered necessary, revise the Frequency Allotment Plan for the Aeronautical Mobile (R) Service contained in Appendix 26 to the Radio Regulations, and the Radio Regulations associated therewith."

The Extraordinary Administrative Radio Conference accordingly convened on the appointed date, and, in accordance with the provisions of Nos. 60 and 61 of the Convention, Geneva, 1959, revised the relevant portions of the Radio Regulations, Geneva, 1959. Particulars of these revisions are given in the attached Annexes.

The revised provisions of the Radio Regulations, Geneva, 1959, shall form an integral part of the Radio Regulations which are annexed to the International Telecommunication Convention. These revised provisions shall come into force on and from the first of July, 1967, except for the Frequency Allotment Plan for the Aeronautical Mobile (R) Service contained in Appendix 27 which shall come into force on and from 0001 hours G.M.T. on the tenth of April, 1970. The provisions of the Radio Regulations, Geneva, 1959, which are cancelled, superseded or modified by these revised provisions shall be abrogated on the dates of coming into force of the respective revised provisions.

The delegates signing this revision of the Radio Regulations, Geneva, 1959, hereby declare that should an administration make reservations concerning the application of one or more of the revised provisions of the Radio Regulations, Geneva, 1959, no other administration shall be obliged to observe that provision or those provisions in its relations with that particular administration.

In witness whereof the delegates of the Members of the Union represented at the Extraordinary Administrative Radio Conference, Geneva, 1966, have signed in the names of their respective countries this revision of the Radio Regulations, Geneva, 1959, in a single copy which will remain in the archives of the International Telecommunication Union and of which a certified copy will be delivered to each Member and Associate Member of the Union.

Members and Associate Members of the Union shall inform the Secretary-General of their approval of the revision of the Radio Regulations, Geneva, 1959, by the Extraordinary Administrative Radio Conference, Geneva, 1966. The Secretary-General will inform Members and Associate Members of the Union promptly regarding receipt of such notifications of approval.

a) It is assumed that for radiotelephone emissions the modulating frequencies will be limited to 3000 cycles per second and that the occupied bandwidth of other authorized emissions will not exceed that of A3 emissions.
d) The grouping of adjacent channels derived from the above table (No. 27/10), to permit the satisfaction of particular requirements will be subject to special arrangements by the administrations concerned.

The list of frequencies to be alloted in the bands allocated exclusively to the Aeronautical Mobile (R) Service, on the basis of the frequency separation provided for under No. 27/10, will be found in the following table:

* Available for A1 emission only.
** Available for A1, A3A, A3H and A3J emissions only.

3. Channels common to $(R)$ and $(O R)$ Services and desirable for the efficient utilization of the frequencies in question.

## B. Interference Range Contours

## 1. Definition of Contours <br> -

3.1 The channels common to the ( R ) and (OR) Services, centred at 3023.5 and $5680 \mathrm{kc} / \mathrm{s}$ are authorized for world-wide use as shown in Nos. 27/196 and 27/201. Notwithstanding these provisions, the frequency $5680 \mathrm{kc} / \mathrm{s}$ may also be used at aeronautical stations for communication with aircraft stations when other frequencies of the aeronautical stations are either unavailable or unknown. However, this use shall be restricted to such areas and conditions that harmful interference cannot be caused to other authorized operations of stations in the aeronautical mobile service.
3.2 All stations using 3023.5 and $5680 \mathrm{kc} / \mathrm{s}$ for search and rescue purposes and employing single sideband (SSB) shall transmit a carrier at a level sufficient to permit reception on a double sideband (DSB) receiver and shall be able to receive DSB transmissions.
3.3 Subject to appropriate co-ordination, stations of the Aeronautical Mobile ( $R$ ) Service using the common ( R ) and (OR) channel centred at $3023.5 \mathrm{kc} / \mathrm{s}$ may operate with their carrier frequency at $3023 \mathrm{kc} / \mathrm{s}$.

The International Civil Aviation Organization (I.C.A.O.) co-ordinates communications of the Aeronautical Mobile ( R ) Service with international air operations for a large part of the world and this Organization should be consulted in appropriate cases, particularly in theoperational use of the frequencies in the Plan.

## 5. Adaptation of Allotment Procedure

It is recognized that not all the sharing possibilities have been exhausted in the Allotment Plan contained in this Appendix. Therefore, in order to satisfy particular operational requirements which are not otherwise met by this Allotment Plan, Administrations may assign frequencies from the aeronautical mobile ( R ) bands in areas other than those to which they are allotted in this Plan. However, the use of the frequencies so assigned must not reduce the protection to the same frequencies in the areas where they are allotted by the Plan below that determined by the application of the procedure defined in Part I, Section II B of this Appendix.
6. When necessary to satisfy the needs of international air operations Administrations may adapt the allotment procedure for the assignment of aeronautical mobile ( $R$ ) frequencies, which assignments shall then be the subject of prior agreement between Administrations affected.
7. Resort to the co-ordination described in No. $\mathbf{2 7 / 2 0}$ shall be made where appropriate
1.1 The transparencies associated with this Appendix show, for the frequencies stated, contours which indicate the minimum acceptable distance separating two aeronautical stations each having a mean effective radiated power of 1.0 kW (for emissions such as A1, F1, F2 and unmodulated emissions A3 and A3H) producing a protection ratio of 15 db of desired signal to interfering signal on the same frequency at an aircraft operating at the limit of the service range of the desired aeronautical station transmitter. This limit is generally assumed to be at the boundary of the area concerned, and the service range is not included in the contour.
1.2 Two types of transparencies are provided for use respectively with the Mercator projection world maps and the Gnomonic projection maps for the polar areas. The Mercator projection transparencies encompass the area between latitude $60^{\circ}$ North and $60^{\circ}$ South. The Gnomonic projection transparencies encompass the areas north of latitude $30^{\circ}$ North and south of latitude $30^{\circ}$ South. The Mercator projection overlaps the Gnomonic projection between latitudes $30^{\circ}-60^{\circ}$ North and $30^{\circ}-60^{\circ}$ South. This overlap is intended to provide continuity between transparencies of the two projections.

## 2. Type of maps used

4. Sharing Conditions between Areas
4.1 The transparencies are constructed on the basis of the following sharing conditions:

| Areas | Bands between: $\mathrm{Mc} / \mathrm{s}$ | Sharing conditions |
| :---: | :---: | :---: |
| MWARA or VOLMET area to MWARA or VOLMET area | $\begin{gathered} 3-6.6 \\ 9-11.3 \\ 13-18 \end{gathered}$ | night propagation <br> day propagation <br> time separation <br> Note: $6.6 \mathrm{Mc} / \mathrm{s}$ and $5.6 \mathrm{Mc} / \mathrm{s}$ sharing conditions are considered to be the same |
| MWARA or VOLMET area to RDARA | $\begin{gathered} 3-5.6 \\ 6.6-11.3 \\ 13-18 \end{gathered}$ | night propagation day propagation time separation |
| RDARA to RDARA | $\begin{gathered} 3-4.7 \\ 5.6-61.3 \\ 13-18 \end{gathered}$ | night propagation day propagation time separation |

4.2 The additional " Day " contours included for $3 \mathrm{Mc} / \mathrm{s}, 3.5 \mathrm{Mc} / \mathrm{s}$ and $4.7 \mathrm{Mc} / \mathrm{s}$ are for determining daylight sharing possibilities.

## 5. Method of Use

27/32 5.1 Take the MWARA, RDARA or VOLMET area maps associated with this Appendix and select the transparency for the frequency order and sharing conditions under consideration.

27/34 5.3 Place the centre of the transparency (i.e., the intersection of the axis of symmetry and the latitude line) over the boundary of the area or at the location of the transmitter. Note the latitude of this point and select the contour corresponding to this latitude.
5.4 A transmitter located at any point outside the contour will result, as defined in No. 27,24, in a protection ratio of better than 15 db .
5.5 A transmitter located at any point inside the contour will result in a protection ratio of less than 15 db . However, if the transmitter is located inside the contour but the propagation path traverses an auroral zone, it is assumed that the signal attenuation within this zone will result in a protection ratio of better than 15 db .
5.7 For either the north or south polar areas, the Gnomonic projection transparency should be positioned so that the north-south line (terminated with an arrow) is parallel to the meridian of longitude, with the arrow pointing towards the pole.
6. Data for tracing interference contours

## C. Classes of Emission and Power

## 1. Classes of emission

In the Aeronautical Mobile (R) Service the use of emissions such as those listed below is permissible provided that such use:

- complies with the provisions of Nos. 27/10-27/16 and Nos. 27/63-27/73 and;
- does not cause harmful interference to other users of the frequency.
1.1 Telephony-Amplitude modulation:
- double sideband
- single sideband, reduced carrier
- single sideband, full carrier
- single sideband, suppressed carrier
- two independent sidebands
1.2 Telegraphy (including automatic data transmissions)
1.2.1 Amplitude modulation:
- telegraphy without the use of a modulating audio frequency (by on-off keying)
- telegraphy by the on-off keying of an amplitude-modulating audio frequency or audio frequencies, or by the on-off keying of the modulated emission
- multichannel voice frequency telegraphy, single sideband, reduced carrier
- multichannel voice frequency telegraphy, single sideband, full carrier
- multichannel voice frequency telegraphy, single sideband, suppressed carrier
1.2.2 Frequency modulation:
- telegraphy by frequency shift keying without the use of a modulating audio frequency, one of two frequencies being emitted at any instant
- telegraphy by the on-off keying of a frequency modulating audio frequency or by the on-off keying of a frequency-modulated emission

### 1.3 Facsimile

- with modulation of the main carrier either directly or by a frequencymodulated sub-carrier

## 2. Power

2.1 Unless otherwise specified in Part II of this Appendix, the peak envelope powers supplied to the antenna transmission line shall not exceed the maximum values indicated in the table below; the corresponding peak effective radiated powers being assumed to be equal to two-thirds of these values:

| Class of emission |  |  |  | Stations | Maximum peak envelope power |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Al |  |  | F2 | Aeronautical stations Aircraft stations |  | $\begin{aligned} & \text { kW } \\ & \text { W } \end{aligned}$ |
|  |  |  |  | Aeronautical stations Aircraft stations | 300 | $\begin{aligned} & \text { kW } \\ & \mathbf{w} \end{aligned}$ |
| Oth <br> A2 <br> A4 | A3A A7A | such A3B A 2 H | $\begin{aligned} & \text { A3J } \\ & \text { A7J } \end{aligned}$ | Aeronautical stations Aircraft stations | 300 | $\begin{aligned} & \text { kW } \\ & \mathbf{W} \end{aligned}$ |

27/55 2.2 It is assumed that the maximum peak envelope powers specified above for aeronautical stations will produce the mean effective radiated power of 1 kW (for emissions such as AI, F1, F2 and unmodulated A3 and A3H emissions) used as a basis for the interference range contours.

27/56 2.3 In order to provide satisfactory communication with aircraft, aeronautical stations serving MWARAs or VOLMET areas may exceed the power limits specified in No. 27/54. In each such case, the administration having jurisdiction over the aeronautical station shall ensure:
$27 / 57$ a) that when there is any possibility of harmful interference co-ordination is effected with the administrations concerned;

27/58 b) that harmful interference is not caused to stations using frequencies in accordance with the applicable provisions of the Allotment Plan;

27/59 c) that in other MWARAs, RDARAs or VOLMET areas alloted the same frequencies, the specified protection ratios within the boundaries of those areas shall be maintained;

27/60 d) that the directional characteristics of the antenna are such as to minimize radiation in unnecessary directions, particularly towards other MWARAs, RDARAs or VOLMET areas which have been allotted the same frequencies;

27,61 e) that, in accordance with the Radio Regulations, all details of the assignment(s), including the transmitting antenna characteristics shall be notified to the I.F.R.B.

27,62 2.4 It is recognized that the power employed by aircraft transmitters may, in practice, exceed the limits specified in No. 27/54. However, the use of such increased power shall not cause harmful interference to stations using frequencies in accordance with the technical principles on which the Allotment Plan is based.
3. Technical provisions relating to the use of single sideband emissions
3.1 Definitions of carrier modes:

| Carrier mode | Level $N$ (db) of the carrier with respect <br> to peak envelope power |
| :---: | :---: |
| Full carrier (A3H) | $0>\mathrm{N}>-6$ |
| Reduced carrier (A3A) | $-6>\mathrm{N}>-26$ |
| Suppressed carrier (A3J) | $-26>\mathrm{N}$ |

### 3.2 Modes of operation:

A transmitter equipped only for single sideband operation and operating in an environment including double sideband stations shall be capable of operation in at least both of the following modes:

- full carrier mode (A3H),
- suppressed carrier mode (A3J).

### 3.3 Tolerance for levels of SSB emission outside the necessary bandwidth

3.3.1 In a single sideband A3H, A3A or A3J transmission, the mean power of any emission supplied to the antenna transmission line of an aeronautical or aircraft station on any discrete frequency, shall be less than the mean power $\left(P_{m}\right)$ of the transmitter in accordance with the following table:
3.3.2

| Frequency separation $\Delta$ <br> from the assigned frequency <br> $\mathrm{kc} / \mathrm{s}$ | Minimum attenuation <br> below mean power $\left(\mathrm{P}_{\mathrm{m}}\right)$ <br> db |
| :---: | :---: |
| $2<\Delta<6$ |  |
| $6<\Delta<10$ |  |
| $10<\Delta$ |  |$\quad$| 25 |
| :---: |
| 35 |
| Aircraft stations: |
| 40 |
| Aeronautical stations: |
| $43+10 \log _{10} \mathrm{P}_{\mathrm{m}}$ (watts) |

### 3.4 Channel utilization

3.4.1 A station using single sideband emissions shall be considered to be operating in accordance with the Allotment Plan if the necessary bandwidth is confined within either the upper or the lower half of the channel provided for double sideband emissions.
3.4.2 Subject to the provisions of No. 27/12, and to the following conditions, a station using single sideband emissions may operate either in the upper half or in the lower half of a double sideband channel designated by its centre frequency in the Allotment Plan:
$27 / 69$ a) when operating in the upper half of the channel, the station shall use upper sideband emissions with the carrier at the channel centre frequency listed in the Allotment Plan;

27/70 b) equipment capable of operating only on integral multiples of $1 \mathrm{kc} / \mathrm{s}$ shall be restricted to the upper halves of the channels listed in the Allotment Plan, when operated in channels having a width of $7 \mathrm{kc} / \mathrm{s}$;

27/71 c) when operating in the lower half of the channel, the station shall use upper sideband emissions with the carrier at the following value below the channel centre frequency listed in the Allotment Plan:

| $10,11,13$ and $17 \mathrm{Mc} / \mathrm{s}$ | $4000 \mathrm{c} / \mathrm{s}$ below |

## 4. Assigned frequencies

4.1 The assigned frequency for single sideband radiotelephone emissions shall be at a value 1500 cycles above the carrier (reference) frequency.
4.2 Stations employing double sideband emissions (A3) shall operate with assigned frequencies at the values listed in the Allotment Plan.

## Frequency Allotment Plan

(in numerical order of frequencies)

## General Notes:

27/192 1. Class of stations: FA.
Classes of emission: see Nos. 27/49-27/53.
Power: unless otherwise indicated in the Plan, the power values for aeronautical and aircraft stations are those shown in Nos. 27/54-27/62.

Hours: H24 unless otherwise indicated.
$27 / 193$ 2. A frequency allotted on a "day-time basis " may be used during the period one hour after sunrise to one hour before sunset when the same channel is alloted in the Plan to Major World Air Route Areas, Regional and Domestic Air Route Areas, Sub-Regional and Domestic Air Route Areas or VOLMET Areas which receive full protection during the twenty-four hours.
$27 / 194$ 3. A "common channel" is a channel alloted in common to areas within interference distance of each other and its use is subject to agreement between the administrations concerned.

# RESOLUTION No. Aer. 1 <br> RELATING TO THE USE OF FREQUENCIES 3023.5 AND 5680 kc ;s COMMON TO THE AERONAUTICAL MOBILE (R) AND (OR) SERVICES 

The Extraordinary Administrative Radio Conference, Geneva, 1966,

## having noted

that some anomalies appeared to exist in the conditions prescribed in Appendix 26 to the Radio Regulations, Geneva, 1959, for the use of the frequencies 3023.5 and $5680 \mathrm{kc} / \mathrm{s}$, as contained in Article 2 of the Frequency Allotment Plan, Column 3, clauses $2 a$ ) and 2 b) and having taken steps to remove these anomalies;

## considering

1. that the coordination of search and rescue operations at the scene of a disaster would be improved if the use of the frequencies 3023.5 and $5680 \mathrm{kc} / \mathrm{s}$, in such operations, was extended to include communication between mobile stations and participating land stations;
2. that it would be in the general interests of the aeronautical mobile service if the same provisions relating to the use of the frequencies 3023.5 and $5680 \mathrm{kc} / \mathrm{s}$ were applied to operations both in the aeronautical mobile ( R ) service and the aeronautical mobile (OR) service;

## resolves

to invite administrations to apply in the aeronautical mobile (OR) service, as from the date of coming into force of the Final Acts of the Conference, the provisions governing the use of the frequencies 3023.5 and $5680 \mathrm{kc} / \mathrm{s}$ specified in Appendix 27 (Nos, 27/196 and 27/201).

## RESOLUTION No. Aer. 2

# relating to the use of frequencies in the hf bands allocated exclusively to the aeronautical mobile (R) SERVICE 

The Extraordinary Administrative Radio Conference, Geneva, 1966,

## considering

a) that monitoring observations on the use of frequencies in the bands allocated exclusively to the aeronautical mobile ( R ) service between 2850 and $17970 \mathrm{kc} / \mathrm{s}$ show that a number of frequencies in these bands are being used by stations of services other than the aeronautical mobile ( $R$ ) service, thus causing harmful interference to aeronautical mobile ( R ) service communications on some international air routes; and that a considerable number of emissions, the sources of which could not be positively identified, were observed in these bands;
b) that the aeronautical mobile ( $R$ ) service is a safety service, to which frequency bands are exclusively allocated in order to ensure the safety and regularity of flight along national or international civil air routes as defined in No. 429 of the Radio Regulations, Geneva, 1959;
c) that in order to protect the safety of life and property in the air, and to operate aeronautical transport services in a regular and effective manner, it is essential that the aeronautical mobile communication channels be kept free from harmful interference;

## recognizing

that the aeronautical mobile ( R ) service is a safety service;

## urges

administrations to abstain from the use of frequencies in the bands exclusively allocated to this service by stations of services other than the aeronautical mobile ( $R$ ) service, except under the express conditions prescribed in No. 115 or No. 415 of the Radio Regulations, Geneva, 1959;

## invites

the I.F.R.B. to continue to organize monitoring observations in the bands exclusively allocated to the aeronautical mobile ( $R$ ) service with a view to eliminating the emissions of out-of-band stations which cause, or are likely to cause, harmful interference to the aeronautical mobile ( R ) service; and to seek the collaboration of administrations in identifying the source of such emission by all available means including the use of automatic recording equipment, direction finding and field strength measurements, and in securing the suppression of these emissions.

## RESOLUTION No. Aer. 3

# RELATING TO THE INTRODUCTION OF SINGLE SIDEBAND TECHNIQUES in the hf bands allocated to the aeronautical mobile (R) SERVICE 

The Extraordinary Administrative Radio Conference, Geneva, 1966,

## considering

a) that congestion should be avoided in the HF bands allocated to the aeronautical mobile (R) service;
b) that the great majority of stations now operating in the HF bands allocated to the aeronautical mobile ( R ) service are capable of operating only in the double sideband radiotelephony mode;
c) that, because of the preponderance of double sideband equipment in use, the Allotment Plan adopted by the Conference is one based on the assumption that all existing stations are capable of operating only in the double sideband radiotelephony mode, and
d) that recent advances in technology may make it possible to avoid congestion in the HF bands allocated to the aeronautical mobile ( R ) service through the use of VHF techniques and of space radiocommunication techniques;

## recognizing

a) that, despite the recent advances in technology permitting the accommodation of the aeronautical mobile ( R ) service in bands other than HF bands, there are many areas of the world where the need for HF communication will continue into the foreseeable future, and in some areas this may be an increasing need;
b) that single sideband radiotelephony has demonstrated advantages over double sideband radiotelephony in many radio services in terms of radio spectrum economy and in reliability of communication, particularly under adverse atmospheric and propagation conditions;
c) that economic, technical and operational considerations make it impracticable to specify, at this time, any definitive date by which the use of double sideband radiotelephony must be discontinued in favour of single sideband radiotelephony;
d) that single sideband equipment of appropriate design can operate compatibly with double sideband systems, and would permit the introduction of SSB on an evolutionary basis;
e) that significant spectrum economy will be realized only when the ratio of SSB-to-DSB users is sufficiently large to make channel splitting practicable; and
f) the desirability of introducing single sideband equipment in the interest of improving the standard of communication and effecting spectrum economy;
resolves

1. that, taking into account economic, technical and operational considerations, administrations shall effect, as soon as possible, a progressive conversion of their HF radiotelephone services in the aero-
nautical mobile ( $R$ ) service from double sideband to single sideband operation using, where necessary, single sideband equipment capable of working compatibly with double sideband systems;
2. that, notwithstanding the foregoing, administrations may continue to instal and operate equipment having characteristics similar to those of equipment in current use;
3. that the International Civil Aviation Organization be invited, as a matter of urgency and within the framework of the decisions taken by this Conference, to establish technical characteristics for system standards relative to single sideband equipment, in respect of application to international operations in the aeronautical mobile (R) service, and to advise the C.C.I.R. of any technical or operational problems on which they would like the assistance of the C.C.I.R.

## RESOLUTION No. Aer. 4

## RELATING TO THE USE OF VIIF FOR COMMUNICATION IN THE AERONAUTICAL MOBILE (R) SERVICE

The Extraordinary Administrative Radio Conference, Geneva, 1966,

## considering

a) that from an aeronautical viewpoint, VHF can provide a more reliable and more noise-free communication system than HF;
b) that from a technical and operational viewpoint, the use of VHF by aviation has progressed appreciably;
c) that the use of VHF in its several modes could appreciably reduce the use of HF in the aeronautical mobile ( R ) service;
d) that, owing to development in the general telecommunication networks in many areas of the world, the possibilities of providing VHF coverage are rapidly increasing;

## resolves

that administrations, to the maximum extent practicable, should employ VHF to meet their requirements in the aeronautical mobile (R) service.

# RESOLUTION No. Aer. 5 <br> RELATING TO THE USE OF VHF FOR METEOROLOGICAL BROADCASTS in the aeronautical mobile (r) SERVICE 

The Extraordinary Administrative Radio Conference, Geneva, 1966, considering

a) that the number of channels available for the aeronautical mobile ( $R$ ) service in the frequency bands between 2850 and $17970 \mathrm{kc} / \mathrm{s}$ is limited;
b) that the need for frequencies for aeronautical mobile ( $R$ ) service communications and for meteorological broadcasts to aircraft is increasing;
c) that the propagation characteristics of high frequencies make them essential for aviation communication requirements over long distances;
d) that in Recommendation No. 13 of the International Administrative Aeronautical Radio Conference, Geneva, 1949, and Resolution No. 14 of the Ordinary Administrative Radio Conference, Geneva, 1959, administrations were urged "to make as great a use as possible of very high frequencies in order to lessen the load on the high frequency ( $R$ ) bands ";
e) that substantial technical progress has been made by aviation since 1949 in extending the operational range of VHF used for communications within the aeronautical mobile (R) service;
f) that this extension of the operational range of VHF could partially meet the increasing need for meteorological broadcasts to aircraft;

## resolves

that administrations, to the maximum extent practicable, should employ VHF for meteorological broadcasts to aircraft.

# RELATING TO THE TREATMENT OF NOTICES CONCERNING FREQUENCY ASSIGNMENTS TO AERONAUTICAL STATIONS IN THE AERONAUTICAL MOBILE (R) SERVICE IN THE BANDS allocated exclusively to that service BETWEEN 2850 AND 17970 kc/s 

The Extraordinary Administrative Radio Conference, Geneva, 1966,

considering
a) that the Final Acts of this Conference will enter into force on 1st July, 1967, but
b) that the revised Frequency Allotment Plan contained in Appendix 27 will enter into force at 0001 hours G.M.T. on 10th April, 1970;
c) that some administrations may wish to implement certain provisions of the revised Frequency Allotment Plan in advance of the latter date where this may be done without causing harmful interference to stations working in accordance with the present Frequency Allotment Plan, Geneva, 1959;
d) that it will therefore be necessary to provide an interim procedure to facilitate transition from the present Frequency Allotment Plan to the revised Frequency Allotment Plan;

## resolves

1. that during the period between the date of entry into force of the Final Acts and the date of entry into force of the revised Frequency Allotment Plan:
1.1 the provisions of Nos. 553 to 559 of the Radio Regulations, Geneva, 1959, shall continue to be applied in the examination of notices concerning frequency assignments to aeronautical stations in the aeronautical mobile ( R ) service in the bands allocated exclusively to that service between 2850 and $17970 \mathrm{kc} / \mathrm{s}$;
1.2 all such assignments shall be recorded in the Master International Frequency Register according to the findings reached by the I.F.R.B.;
1.3 the date to be entered in Column 2a or 2 b of the Master International Frequency Register shall be as follows:
a) if the finding is favourable with respect to Nos. 554 to 557, the date of 3rd December 1951 shall be entered in Column 2a;
b) if the finding is favourable with respect to No. 558, the date of 3rd December 1951 shall be entered in Column 2b;
c) for all other such assignments (including those which may be in conformity with the revised Frequency Allotment Plan but not in conformity with the present Frequency Allotment Plan) the date of receipt of the notice by the I.F.R.B. shall be entered in Column 2b;
1.4 any assignment which is in accordance with the revised Frequency Allotment Plan shall be so indicated by the insertion by the I.F.R.B. of an appropriate symbol in the Remarks Column of the Master International Frequency Register;
2. that on the date of coming into force of the revised Frequency Allotment Plan, the I.F.R.B. shall examine those frequency assignments to aeronautical stations in the aeronautical mobile ( $R$ ) service in the bands allocated exclusively to that service between 2850 and $17970 \mathrm{kc} / \mathrm{s}$, which are contained in the Master International Frequency Register from the point of view of their conformity with the revised Frequency Allotment Plan following the relevant parts of the procedure described in Nos. 553 to 559 of the

Radio Regulations, Geneva, 1959, as modified by the Extraordinary Administrative Radio Conference, Geneva, 1966, and shall record against them in the Master International Frequency Register a date in Column $2 a$ or $2 b$ as follows:
2.1 assignments found favourable with respect to Nos. 554 to 557 shall have the date of 29 th April 1966 entered in Column 2a;
2.2 assignments found favourable with respect to No. 558 shall have the date of 29 th April 1966 entered in Column 2b;
2.3 all other assignments shall have the date of 30 th April, 1966 entered in Column 2 b ;
3. that, on the date of entry into force of the revised Frequency Allotment Plan, the allotments therein shall replace in the Master International Frequency Register those allotments in the present Frequency Allotment Plan;

## invites

administrations to notify to the I.F.R.B. as soon as possible the cancellation of frequency assignments released as a consequence of bringing into use the allotments in the revised Frequency Allotment Plan.

Uitgegeven de zevenentwintigste september 1967.
